

Creating interest with native landscaping

Dry Creek Bed

benefits

- ✓ improve your landscape
- ✓ control runoff
- ✓ receive financial reimbursement
- ✓ protect Lake Whatcom

upgrade your yard

Enhance curb appeal by incorporating this design feature into your HIP Native Landscaping project.

design with ease

Dry creekbeds add interest to your yard and are easy to design and install.

reduce maintenance

Landscaping with a low-phosphorus rock allows more time to enjoy your garden.

Want to create features that complement your HIP Native Landscaping design?

Dry creek beds add interest and structure to your landscape, help control runoff, and require minimal maintenance. Low-phosphorus rock can be used to create a false creek feature that is easy to incorporate into your native landscaping design.

Dry creek bed materials such as clean rock are reimbursed by HIP for up to \$2.00 per square foot of the dry creek bed, providing it is part of an approved HIP Native Landscaping project.
